

Star of Hope Update

Building Stabilization Efforts Continue on this Historic Landmark

In January the engineers and construction crew working on the Star of Hope Lodge discovered significant structural challenges that called for a temporary stop to determine what is needed to stabilize the building for the long-term.

Originally, the Lodge was two separate buildings that were later joined with one new entrance and the addition of a third floor. In addition to insufficient structural support the building has had significant water damage. A revised plan has been put in place and the team continues its work to complete the stabilization by Memorial Day.

Our sincere thanks go to Casey Leonard and Rockport Building Partners, OPAL and the structural engineers who have worked tirelessly to perform the significant work to save this landmark.
